WEATHER

WEATHER SYNOPSIS BY REGION:

NORTHERN CALIFORNIA

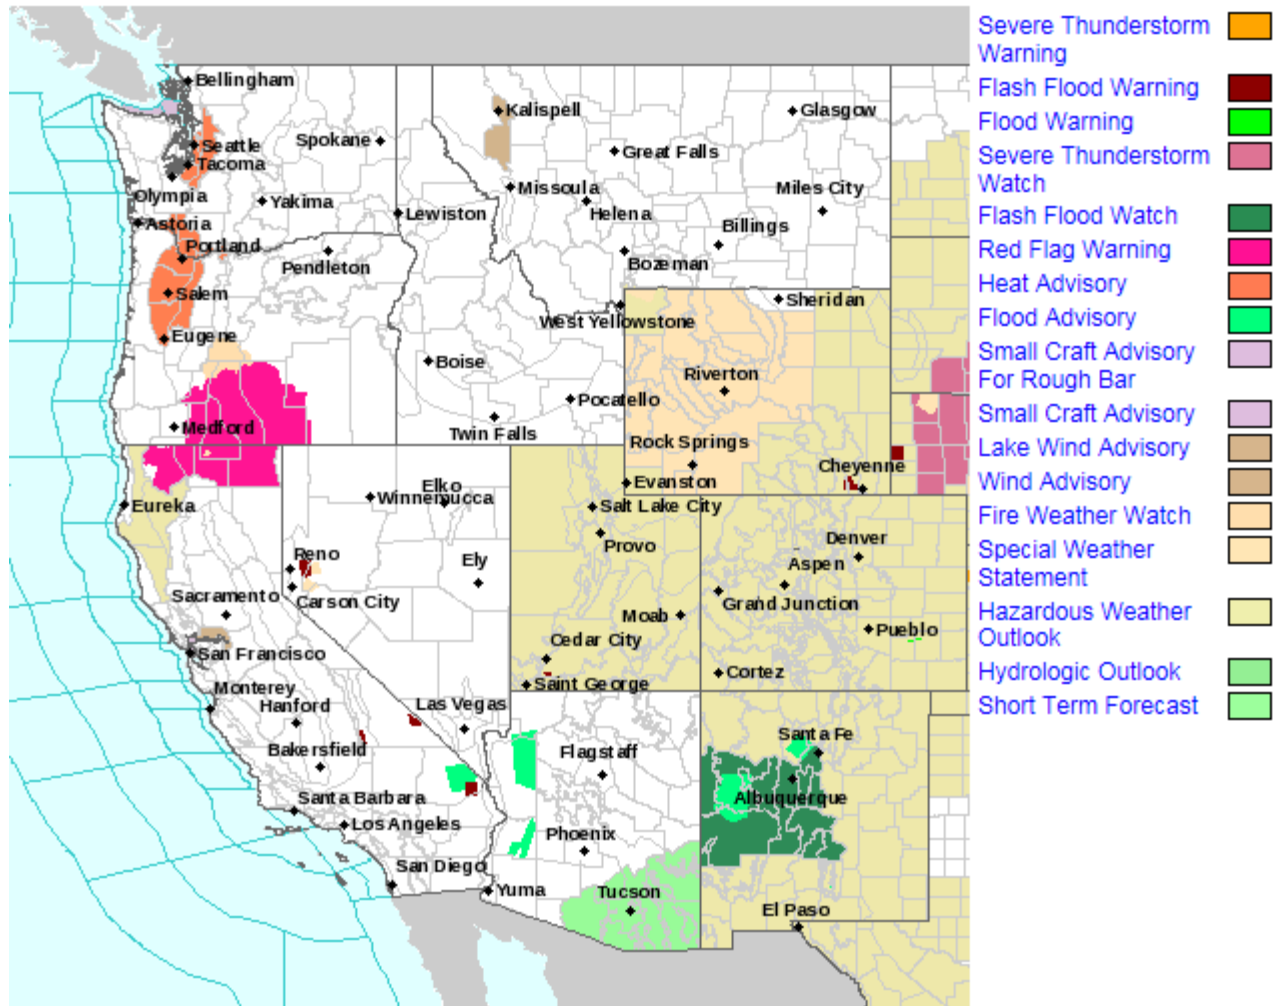

With a low pressure parked off shore and high pressure over the Great Basin, monsoon moisture is spreading north over California. This will keep a steady supply of moisture available for daily afternoon and evening, even possibly overnight, thunderstorms for the next few days, primarily over the northern and eastern mountains. The low will gradually migrate toward the coast next week, and the Great Basin high will weaken, but conditions will remain unstable and moist enough to continue the daily, north and eastern mountain thunderstorm regime. There may even be outright showery periods in addition to having thunderstorms. The Sacramento Valley, Bay Area and much of the Mid Coast Predictive Service Area's will be the driest areas. Although the timing is quite uncertain at the moment, there are increasing indications the low will move ashore late next week and bring a cooler, moist air mass with it that would bring and overall decrease to Significant Fire Potential to all of Northern California in spite of the expectation that there will continue to be daily thunderstorms as well. Temperatures will be above seasonal normals for inland areas the next few days, then some cooling will bring things pretty much to around normal for the time of year. That will mean the warmer inland valleys will soon cool into the mid and upper 90s. Winds will also be seasonably light and mostly southerly to westerly for the 7 day period

SOUTHERN CALIFORNIA

Isolated afternoon showers and thunderstorms will form over the Sierra through the end of next week as a weak area of low pressure sits and spins off the Central California Coast. Temperatures will be near normal through Tuesday, with mid 70s to mid 80s in the mountains and upper 80s and 90s in the valleys. Temperatures will become a little below normal Wednesday through the end of next week as the low pressure area approaches the coast and moves inland. Minimum humidity will remain mainly between 15% and 30% away from the coastal areas through the end of next week. The marine layer will be around 2,000 feet deep through Tuesday and then deepen to around 3,000 feet Wednesday through the end of next week. Westerly winds of 15 to 25 mph with gusts to 40 mph will surface over the Tehachapi Mountains, Antelope Valley, and Banning Pass Wednesday afternoon through the end of next week.
